

Mobile Application Development with Flutter

Lecture 11: Maps in Dart

Maps in Dart

- A **Map** stores data in key-value pairs
- In Map, each key must be unique
- They are similar to Dictionaries in other languages

Prepared by Ehtisham Rasheed

Map Operations

- Adding element
- Updating an element
- Looping through a map
 - for-in loop, for-each, for-each with arrow
- Convert map keys and values to list

Prepared by Entisham Rasheed

Map Properties

- Keys
- Values
- isEmpty
- isEmpty
- Length

Prepared by Ehtisham Rasheed

Map Methods

- `containsKey()`
- `containsValue()`
- `clear()`
- `remove()`
- `removeWhere()`
