

Mobile Application Development with Flutter

Lecture 15: Icon Widget in Flutter

Introduction

- In modern mobile applications, icons are widely used to represent actions and features visually
- For example:
 - 🏠 Home
 - ❤️ Favorite
 - ⚙️ Settings
 - 🔍 Search
 - 🛒 Cart
- Flutter provides a built-in **Icon widget** which allows us to display icons easily using the **Material Icons library**

Material Icons in Flutter

- Flutter comes with a large set of icons from **Material Design**
- We can explore them here:
 - <https://fonts.google.com/icons>
- Examples of Material icons:
 - Icons.home
 - Icons.favorite
 - Icons.settings
 - Icons.person
 - Icons.search
 - Icons.shopping_cart

Icon Widget

- The **Icon widget** is used to display icons in Flutter
- Basic syntax:

```
Icon(Icons.home)
```

- Changing icon size
- Changing icon color

IconButton Widget

- Icons are often used as **buttons** in mobile applications
- Flutter provides the **IconButton** widget for this purpose

```
IconButton(  
  icon: Icon(Icons.add),  
  onPressed: () {},  
)
```

IconButton Example

```
IconButton(  
  icon: Icon(Icons.thumb_up),  
  iconSize: 40,  
  color: Colors.blue,  
  onPressed: () {  
    print("Button Pressed");  
  },  
)
```
