

Mobile Application Development with Flutter

Lecture 16: Images in Flutter

Introduction

- Images are an essential part of mobile applications. Almost every application uses images such as:
 - Logos, profile pictures, product images, banners etc
- Flutter provides the **Image widget** to display images easily
- Images in Flutter can come from different sources such as:
 - Asset images (stored inside the project)
 - Network images (loaded from the internet)
 - File images
 - Memory images
- In this lecture we will focus on the **two most common types**:
 - Asset Images & Network Images

Image Widget

- Flutter provides the **Image widget** to display images

```
Image.asset("assets/images/flutter_logo.png")
```

- Or

```
Image.network("image_url")
```

- `Image.network('https://picsum.photos/250?image=9')`
- `Image.network('https://docs.flutter.dev/assets/images/dash/dash-fainting.gif')`

Image Fit Property

- Sometimes an image must fit inside a specific area
- Flutter provides the fit property
- Common values:

Fit Type	Description
BoxFit.cover	Fill the container
BoxFit.contain	Show full image
BoxFit.fill	Stretch image
BoxFit.fitWidth	Fit width
BoxFit.fitHeight	Fit height

Other Important Properties

- Height
- Width
- Effect of double.infinity
- Repeat
- Alignment
- Circleavatar
