

Mobile Application Development with Flutter

Lecture 17: Buttons in Flutter

Introduction

- Buttons are one of the most important components of any mobile application
- They allow users to **interact with the application**
- Examples of buttons in apps include:
 - Login button
 - Submit button
 - Add to cart
 - Like button
 - Navigation buttons
- In Flutter, buttons are used to **trigger actions when pressed**

Types of Buttons in Flutter

- Flutter provides several built-in button widgets:

1. ElevatedButton
2. TextButton
3. OutlinedButton
4. IconButton
5. FloatingActionButton

1. ElevatedButton

- ElevatedButton is the most commonly used button in Flutter
- It appears raised with a background color
- Styling ElevatedButton
 - elevation, shadowColor, textStyle
 - fixedSize, minimumSize, maximumSize
 - backgroundColor, foregroundColor
 - shape (RoundedRectangleBorder, StadiumBorder, CircleBorder, BeveledRectangleBorder)
- Adding an icon to a button
- Disable button
- Apply border to button

2. TextButton

- TextButton is a simple button without background
- It looks like clickable text
- We can also apply styles as well
- Common uses:
 - Links
 - Dialog actions
 - Navigation

3. OutlinedButton

- OutlinedButton has a border around it but no filled background

```
OutlinedButton(  
  onPressed: () {  
    print("Outlined Button Pressed");  
  },  
  child: Text("Cancel"),  
)
```

4. IconButton

- IconButton is a button that displays an icon instead of text
- Common properties
 - onLongPress
 - iconSize
 - color

```
IconButton(  
  icon: Icon(Icons.thumb_up),  
  onPressed: () {  
    print("Like pressed");  
  },  
)
```

5. FloatingActionButton

- FloatingActionButton is a circular button that floats above the UI
- Usually used for primary actions like:
 - Add item
 - Create post
 - Open camera

```
Scaffold(  
  appBar: AppBar(title: Text("FAB Example")),  
  body: Center(child: Text("Hello")),  
  floatingActionButton: FloatingActionButton(  
    onPressed: () {  
      print("FAB Pressed");  
    },  
    child: Icon(Icons.add),  
  ),  
)
```

Deprecated Buttons

- RaisedButton
- FlatButton
- OutlineButton

Prepared by Ehtisham Rasheed

Quick Comparison

Property	ElevatedButton	TextButton	OutlinedButton
backgroundColor	✓	✓	✓
foregroundColor	✓	✓	✓
padding	✓	✓	✓
fixedSize	✓	✓	✓
shape	✓	✓	✓
elevation	✓	✗	✗
border (side)	✓	✓	✓

Example:

- Let's create an App which will update title when we click on a button every time.
