

Mobile Application Development with Flutter

Lecture 35. Drawer Widget in Flutter

What is Drawer in Flutter?

- A **Drawer** is a hidden side menu that appears from the left side of the screen
- It is a side navigation panel that allows users to move between different parts of the app
- 👉 It is used for:
 - Navigation
 - Menu options
 - App sections

Some Screenshots

Real-Life Examples

- Almost every app uses Drawer:
- Gmail → menu (Inbox, Sent, Spam)
- Facebook → settings & options
- Banking apps → account, transactions, logout

Why Do We Use Drawer?

1. Organize Navigation

- Instead of cluttering UI, we keep options inside Drawer

2. Save Screen Space

- Main screen stays clean

3. Professional UI

- Apps look structured and real

4. Easy Access to Features

- User can open menu anytime

Where is Drawer Used?

👉 Inside Scaffold

```
Scaffold(  
  appBar: AppBar(),  
  drawer: Drawer(),  
)
```

👉 Drawer automatically appears when:

- You add it to Scaffold
- AppBar shows **hamburger icon** (≡) automatically

Basic Drawer Structure

Components of Drawer

- Drawer widget
- ListView (scrollable menu)
- DrawerHeader (top section)
- ListTile (menu items)

Prepared by Ehtisham Rasheed

Best Practices

- ✓ Always use ListView
- ✓ Keep menu simple
- ✓ Use icons + text
- ✓ Close drawer before navigation
- ✓ Avoid too many items

Prepared by Ehtisham Rasheed

Common Mistakes

- ✗ Not using `Navigator.pop()`
- ✗ Using `Column` instead of `ListView`
- ✗ Overcrowding Drawer
- ✗ No icons (bad UX)
