

Mobile Application Development with Flutter

Lecture 36. Bottom Navigation in Flutter

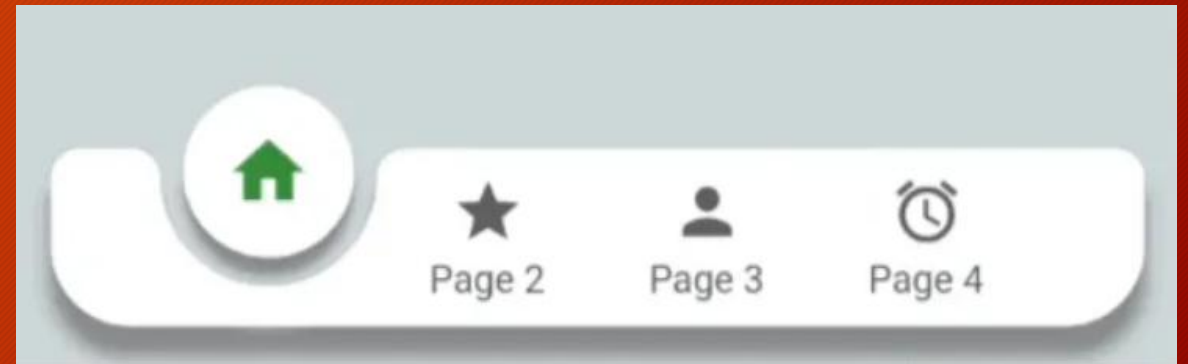

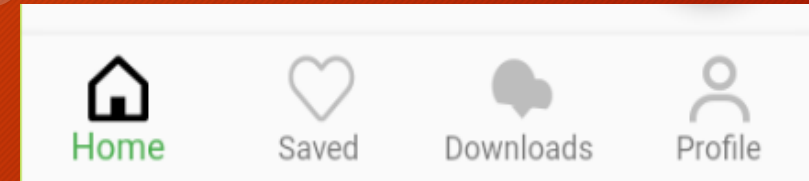

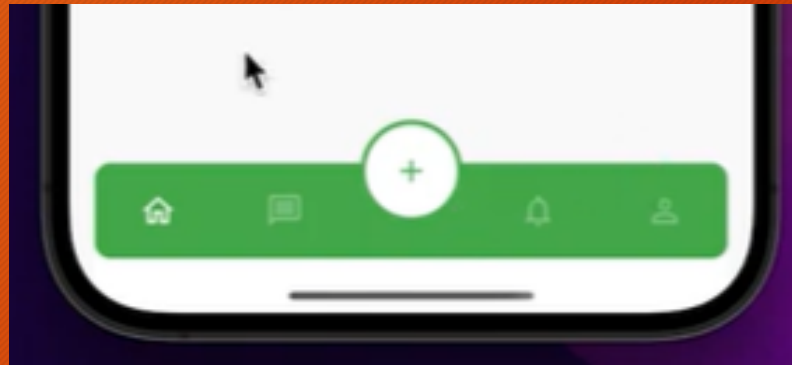

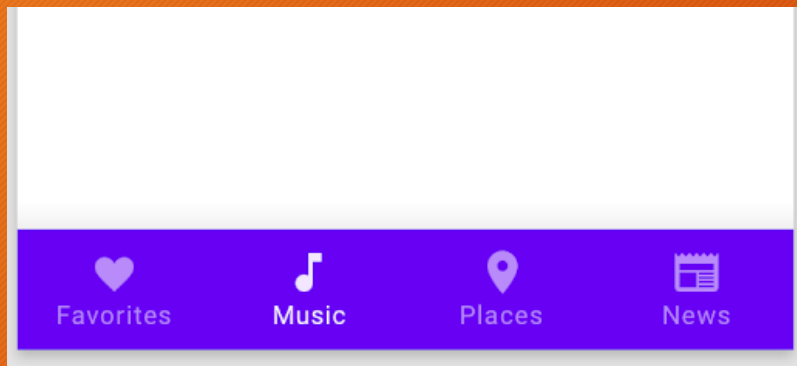

What is Bottom Navigation?

- A **Bottom Navigation Bar** is a menu placed at the **bottom of the screen** that allows users to switch between different screens

OR

- Bottom Navigation is used to switch between major sections of an app using tabs at the bottom
-  **Real App Examples**
 - Instagram → Home, Search, Reels, Profile
 - WhatsApp → Chats, Status, Calls
 - YouTube → Home, Shorts, Subscriptions

Some Screenshots

Bottom Navigation

Use it when:

- You have **3-5 main sections**
- All sections are equally important
- You want **quick switching**

When NOT to Use It

- Too many items (more than 5)
- Deep navigation (use Drawer instead)

Drawer vs Bottom Navigation

Feature	Drawer	Bottom Navigation
Position	Side	Bottom
Visibility	Hidden	Always visible
Use case	Many options	Few main sections

Where is Bottom Navigation Used?

👉 Inside Scaffold

```
Scaffold(  
  bottomNavigationBar: BottomNavigationBar(),  
)
```
