

Mobile Application Development with Flutter

Lecture 59. Flutter Custom Widgets

What is a Custom Widget?

- A custom widget is:
 - 👉 A reusable widget created by developers
- Flutter already gives built-in widgets like:
 - Text
 - Container
 - ElevatedButton
- But we can also create our own widgets

Why Custom Widgets are Important

Without custom widgets	With custom widgets
✗ Duplicate code	✓ Cleaner code
✗ Large files	✓ Reusable UI
✗ Difficult maintenance	✓ Easy updates
✗ Hard to update UI	✓ Professional structure

Another Example – Custom Text Widget

```
class CustomTitle extends StatelessWidget {  
  
  final String text;  
  
  const CustomTitle({  
    super.key,  
    required this.text,  
  });  
}
```

```
@override  
Widget build(BuildContext context) {  
  
  return Text(  
    text,  
  
    style: const TextStyle(  
      fontSize: 28,  
      fontWeight: FontWeight.bold,  
    ),  
  );  
}
```
